Major Construction Projects Trust VaproShield Membranes

Music City Center, Nashville, TN

The nation's largest construction project in 2010-2013, Music City Center, trusted VaproShield's WrapShield SA Self-Adhered water resistive, air barrier sheet membrane to protect its \$415M investment.

Multi-Substrate Compatibility -

installed over insulation and gypsum in a rain screen design application.

All Weather Construction - WrapShield SA Self-Adhered

does not require primer, has zero VOC's and can be applied in temperatures from 20F° and rising and can withstand 180 days climate and UV exposure.

Energy Saving - WrapShield SA Self-Adhered

membrane far exceeds the baseline standard of the rigorous ASTM 2357 test, ensuring life-long energy savings.

Phase Construction Friendly -

no special installation equipment was required, WrapShield SA Self-Adhered easily fit into the 3 year construction schedule with no delays.

On The Roof -

The guitar shaped roof made the cover of Roofing Contractor, with WrapShield SA Self-Adhered being applied to the raised portion of the roof.

The Stack - Upper Manhattan

Photo courtesy of Gluck+

VaproShield's WrapShield SA Self-Adhered was used on 56 steel and concrete prefabricated modules in the unique, seven-story, 28-unit apartment building known as "The Stack" on an infill site in Upper Manhattan.

The Stack was "put together" in June 2013, and drew the attention of Architectural Record, Architect Magazine and International Business Times.

VaproShield in the News

GreenSource Magazine

Studio 804's most recent project was highlighted in GreenSource Magazine. The project which uses RevealShield™ was built to achieve LEED platinum status.

Architectural Record

The new campus for the software giant Adobe was featured in the August issue of Architectural Record.

What is NFPA 285?

NFPA 285 evaluates the vertical and horizontal spread of fire away from the point of origin. During the 30-minute test, temperatures are monitored throughout the wall using dozens of thermocouples embedded in the insulated wall panel. Exterior face, core, air cavity, and interior temperatures at various levels throughout the wall assembly are recorded.
