VaproBatten[™]

PROJECT DESCRIPTION

Located at 825 Kings Road in West Hollywood, this 19 unit building, 25,000 square feet, open joint project opened in summer of 2007. The majority of the project has a 3/8" open joint between each 6" high cedar siding panel. Due to the special nature of the siding design, VaproShield representative, Greg McAloney, spent months working with the architect and developer to evaluate the best approach.

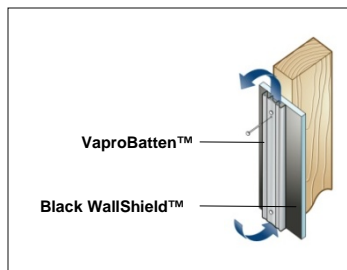

They used a double layer of Black WallShield per the details and specifications. The success of the installation has led to Archetype committing to three additional large condominium projects with VaproShield products.

Installation of Black WallShield

Completed project with 6" cedar siding over Black WallShield
